The MAILING DATE of this communication appears on the cover sheet with the correspondence address All claims being allowable, PROSECUTION ON THE MERITS IS (OR REMAINS) CLOSED in this application. If not included herewith (or previously mailed), a Notice of Allowance (PTOL-85) or other appropriate communication will be mailed in due course. THIS NOTICE OF ALLOWABILITY IS NOT A GRANT OF PATENT RIGHTS. This application is subject to withdrawal from issue at the initiative of the Office or upon petition by the applicant. See 37 CFR 1.313 and MPEP 1308.		
1. This communication is responsive to <u>amendment filed 12/02/2004</u> .		
2. The allowed claim(s) is/are <u>1-11</u> .		
3. The drawings filed on <u>04 June 2001</u> are accepted by the Examiner.

## Reasons for Allowance

1. Claims 1-11 are allowed.

The following is an examiner's statement of reasons for allowance: 2.

While Fisher (Patent No. 6,075,628) discloses fault location in optical communication systems including an optical conversion function 32 which converts the optical input signal into a voltage proportional to the optical power with a low pass filter for removing unwanted noise. This circuit only active during that part of a frame which there is no noise or other signal except the reflections from the fibre discontinuities.

And Hill (Patent No. 6,334,219) teaches a monitoring system for a multi-point to point communication includes a hybrid fiber/coax distribution network. The system prevents untoward spectral effects in the multicarrier signal from variations in channel activity with a notch filter for identifying the ingress location on the frequency band.

Neither of these references taken either alone or in combination discloses a method and device for performance-monitoring of a synchronous optical network standard signal having all the claimed features of applicant's instant invention, specifically including: separating from the electrical signal the framing signal portion thereof and leaving in its time slot the noise that was on the framing signal, wherein the data power is essentially undisturbed. Additionally, the noise power can then be use to compare with the signal power in a data portion of the SONET signal to determine a measure of quality of the SONET signal. Also, there is no motivation to combine the Fisher reference with the Hill reference to meet these limitations. It is for these reasons that applicant's invention defines over the prior art of record.

Any comments considered necessary by applicant must be submitted no later

than the payment of the issue fee and, to avoid processing delays, should preferably

accompany the issue fee. Such submissions should be clearly labeled "Comments on

Statement of Reasons for Allowance."
